The buildings steps [] the buildings have 3 different stages of materials and building materials. If you use the SHIFT button together with the mouse wheel, you can customize objects in the vertical position. Initially, in your own key cabin, for example, to be safe from the ends of a sandstorm or hide from enemy creatures. With a repair hammer, a player can show the remaining reuse of a structure. The building is one of the essential components of Conan Exiles. Construction Instructions [] Please provide a construction guide! Decay System [] To prevent the card from being skillful in server abandoning players, the server expires buildings over time. However, there is no limit to a building so wide or long, the height is written. Close individual parts, there is also the possibility to see what materials are needed for repair. If a member of the player or clan belonging to a structure approaches, the decomposition timer increases to the maximum. Through the housing of bodies for wood and the degradation of stone and other valuable resources, materials are obtained to create a complex world with many structures. The altaine increases the expiration time (both the limitation and the remaining time) of smaller buildings massively. If you touch a reputable hammer, you can see the condition of the building or it is also a main task to broaden the base of your own building to get more stability to build. Level 3 Buildings (Level 3) - Major structures (hand bricks, wood shaped wood and steel strainer): Steel buildings cannot be damaged by weapons, but are only damaged by explosive objects. After a structure expires (the status on the list in the register of es euq sarutcurtse sal.
